

PLASTECNIC®

Self-lubricating **Plates** and lining **Kits** for the fifth wheel

Established in 1995, **PLASTECNIC** has been manufacturing self-lubricating plates for all fifth wheel models, which avoids superficial greasing of the fifth wheel. Always using materials and manufacturing techniques that guarantee the maximum quality and the best protection of the fifth wheel while optimizing functionality and increasing its useful life.

P L A S T E C N I C®

JUST 37C SELF-ADJUSTABLE PLATE

It is a self-lubricating plate manufactured by injection molding. The plastic compound used is a high-grade density polyethylene that provides high performance for the fifth wheel's lubrication. This particular plate does not require drilling or screws.

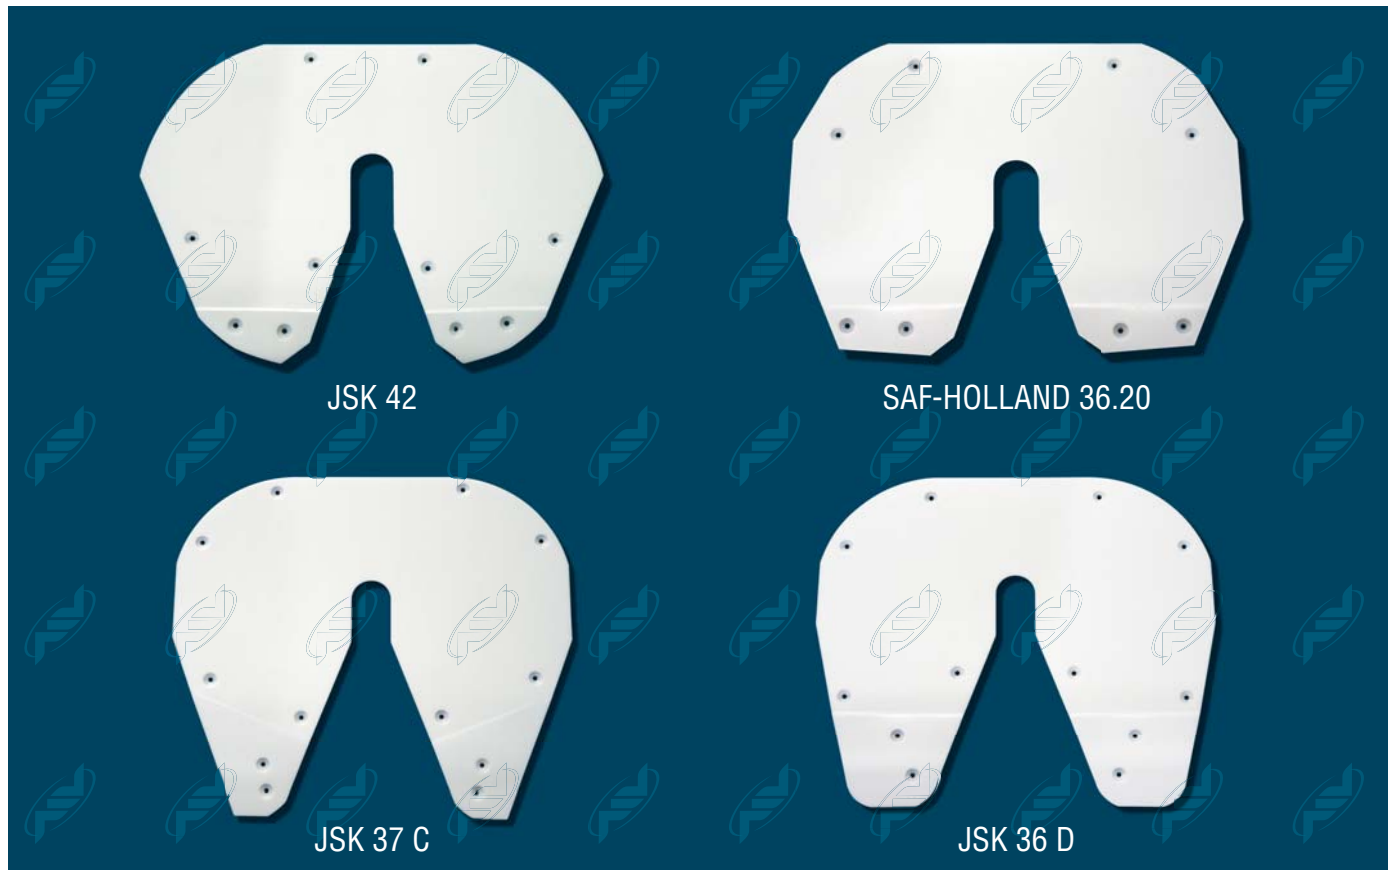

Only valid for Jost 37C. **Under our patent.**

SELF-LUBRICATING PLATES FOR ALL FIFTH WHEEL MODELS

Made of an antistatic P1000 material: Low coefficient of friction, resistance to static charges, and excellent chemical resistance are among the many characteristics of this high-quality material **under our patent.**

*Includes the necessary screws for proper installation.

LINING KITS FOR ALL FIFTH WHEEL MODELS

They are manufactured into two qualities: antistatic P1000 polyethylene and antistatic ecological P1000 polyethylene. Eco-friendly polyethylene is a recycled material made from P1000 polyethylene, which provides very similar characteristics at a lower cost.

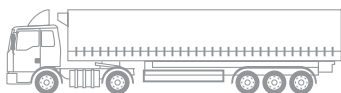

*Includes the necessary screws for proper installation.

ADVANTAGES AND CHARACTERISTICS:

- UP TO 400.000 Km.
- SIGNIFICANT WORKFORCE REDUCTION.
- KEEPS THE FIFTH WHEEL COUPLING FREE OF GREASE AND DUST.
- THE PLATE ISOLATES THE FIFTH WHEEL FROM THE PLATFORM, PREVENTING THE MAGNETIC EFFECT PRODUCED BY STATIC CHARGES GENERATED BY TWO METALLIC MATERIALS' DIRECT RUBBING.
- IMPROVES THE VEHICLES MANEUVRABILITY.
- EXCELLENT RESISTANCE TO WEAR AND ABRASION.
- IMPROVED BEHAVIOR AT LOW TEMPERATURES.
- ONE YEAR WARRANTY.
